1. Haga un programa en OpenGL que dibuje un cubo unitario con centro en C=(0, 0, 0).

```
void dibujaCuboUnitario(){
   GLfloat vertice [8][3] = {
      { 0.5f, -0.5f, 0.5f}, // Vértice 0
      {-0.5f, -0.5f, 0.5f}, // Vértice 1
      {-0.5f, -0.5f, -0.5f}, // Vértice 2
      { 0.5f, -0.5f, -0.5f}, // Vértice 3
      { 0.5f, 0.5f, 0.5f}, // Vértice 4
      { 0.5f, 0.5f, -0.5f}, // Vértice 5
      {-0.5f, 0.5f, -0.5f}, // Vértice 6
      {-0.5f, 0.5f, 0.5f}, // Vértice 7
   };
   glBegin(GL_POLYGON); //Front
   glColor3f(0.0f, 0.0f, 1.0f);
   glVertex3fv(vertice[0]);
   glVertex3fv(vertice[4]);
   glVertex3fv(vertice[7]);
   glVertex3fv(vertice[1]);
   glEnd();
   glBegin(GL_POLYGON); //Right
   glColor3f(0.0f, 1.0f, 0.0f);
   glVertex3fv(vertice[0]);
   glVertex3fv(vertice[3]);
   glVertex3fv(vertice[5]);
   glVertex3fv(vertice[4]);
   glEnd();
   glBegin(GL_POLYGON); //Back
   glColor3f(0.0f, 1.0f, 1.0f);
   glVertex3fv(vertice[6]);
   glVertex3fv(vertice[5]);
   glVertex3fv(vertice[3]);
   glVertex3fv(vertice[2]);
   glEnd();
   glBegin(GL_POLYGON); //Left
   glColor3f(1.0f, 0.0f, 0.0f);
  glVertex3fv(vertice[1]);
```

```
glVertex3fv(vertice[7]);
glVertex3fv(vertice[6]);
glVertex3fv(vertice[2]);
glEnd();
glBegin(GL_POLYGON); //Bottom
glColor3f(1.0f, 0.0f, 1.0f);
glVertex3fv(vertice[0]);
glVertex3fv(vertice[1]);
glVertex3fv(vertice[2]);
glVertex3fv(vertice[3]);
glEnd();
glBegin(GL_POLYGON); //Top
glColor3f(1.0f, 1.0f, 0.0f);
glVertex3fv(vertice[4]);
glVertex3fv(vertice[5]);
glVertex3fv(vertice[6]);
glVertex3fv(vertice[7]);
glEnd();
```

2. Se tiene un cubo unitario, cuyo centro ésta en C=(0, 0, 0), éste se quiere que esté rotando sobre su propio eje z continuamente en el punto VT=(1, 0, -7)¿Cuál es el orden de las transformaciones para cumplir el enunciado anterior?, haga un programa en OpenGL para visualizar ésto.

```
float ang = 0.0;

void display()
{
    glClear(GL_COLOR_BUFFER_BIT);
    glMatrixMode(GL_MODELVIEW_MATRIX);
    glLoadIdentity();

    ang = (ang > 360) ? 0.0f : ang + 0.1f;

    glTranslatef(1.0f, 0.0f, -7.0f);
    glRotatef(ang, 0.0, 0.0f, 1.0f);
    dibujaCuboUnitario();

glFlush ();
}
```
